Subject: ASTM Reference to ground rubber

Hi folks,

I'm back to working on updating the ground rubber section of the website. Mark has suffered far too long waiting for me.

Question: Is ASTM D6270, which was created for Tire-Derived- Aggregate the definitive reference for the smaller sizes as well?

I suspect not, or not completely, because D6270 has a footnote referencing Committee D11 on Rubber in regard to the definition of particulate rubber. I don't have a copy of the D11 work. However, assuming the two works jive, I only need to know the spec #.

I think I should be referencing the right D11 spec, but I don't know which one it is.

Drifting to a tangent for a moment: I suspect that D6270 does better than D11 at defining the larger sizes. Right? Or did D11 cover that one too? Did ASTM tackle TDF specs? If so, what number would that be?

We are not supposed to freely share the ASTM document but just to aid the discussion, I've included a section of the D6270 definitions below. I edited out the parts that had little to do with size definitions. This came from a draft – don't know whether it became the final. As you can see, even though D6270 is about TDA, they included the soup and the nuts, all the way from powder to the distinction between passenger car tires and truck tires based on rim size.
